#### Chapter 3 Properties of a Random Sample

**Theorem 1.** If X is a random variable and u(x) is a nonnegative real-valued function, then for any positive constant c > 0.

$$P[u(X) \ge c] \le \frac{E[u(X)]}{c}$$

# 3 Properties of a Random Sample

# 3.1 Convergence in Probability

In this section, we formalize a way of saying that a sequence of random variables  $\{X_n\}$  is getting "close" to another random variable X, as  $n \to \infty$ .

**Definition 1.** Let  $\{X_n\}$  be a sequence of random variables and let X be a random variable defined on a sample space. We say that  $\{X_n\}$  converges in probability to X if, for all  $\epsilon > 0$ ,

$$\lim_{n \to \infty} P[|X_n - X| \ge \epsilon] = 0,$$

or equivalently

$$\lim_{n \to \infty} P[|X_n - X| < \epsilon] = 1,$$

If so, we write

$$X_n \stackrel{P}{\to} X$$
.

One way of showing convergence in probability is to use Chebyshev's Theorem.

MEME15203 STATISTICAL INFERENCE

202301

#### Chapter 3 Properties of a Random Sample

A special case, known as the **Markov inequal**ity, is obtained if  $u(x) = |x|^r$  for r > 0, namely

$$P[|X| \ge c] \le \frac{E[|X|^r]}{c^r}$$

Theorem 2. Chebychev inequality If X is a random variable with mean  $\mu$  and variance  $\sigma^2$ , then for any k > 0,

$$P[|X - \mu| \ge k\sigma] < \frac{1}{k^2}$$

An alternative form is

$$P[|X - \mu| < k\sigma] \ge 1 - \frac{1}{k^2}$$

and if we let  $\epsilon = k\sigma$ , then

$$P[|X - \mu| < \epsilon] \ge 1 - \frac{\sigma^2}{\epsilon^2}$$

and

$$P[|X - \mu| \ge \epsilon] \le \frac{\sigma^2}{\epsilon^2}$$

MEMEI5203 STATISTICAL INFERENCE 202301 MEMEI5203 STATISTICAL INFERENCE 202301

### Example 1.

Suppose that X is a nonnegative random variable for which  $P(X \ge 17) = 0.6$ . Show that  $E(X) \ge c$  and identify c.

# Example 2.

Suppose that X is a random variable for which E(X) = 14,  $P(X \le 9) = 0.24$ , and  $P(X \ge 19) = 0.39$ . Prove that V(X) > c and identify c.

Chapter 3 Properties of a Random Sample

**Theorem 3.** (Weak Law of Large Numbers). Let  $\{Xn\}$  be a sequence of iid random variables having common mean  $\mu$  and variance  $\sigma^2$ . Let  $\bar{X}_n = \frac{\sum_{i=1}^n X_i}{n}$ . Then

$$\bar{X}_n \stackrel{P}{\to} \mu$$
.

Chapter 3 Properties of a Random Sample

#### Example 3.

Let  $X_1, \ldots, X_n$  denote a random sample from a distribution with mean  $\mu$  and variance  $\sigma^2$ . Assume that  $E[X_i^4] < \infty$ . Show that  $\frac{\sum_{i=1}^n X_i^2}{n}$  converges in probability to  $E(X_i^2)$ .

**Theorem 4.** Suppose  $X_n \stackrel{P}{\to} X$  and  $Y_n \stackrel{P}{\to} Y$ Then  $X_n + Y_n \stackrel{P}{\to} X + Y$ . **Theorem 5.** Suppose  $X_n \stackrel{P}{\to} X$  and a is a constant. Then  $aX_n \stackrel{P}{\to} aX$ .

## Chapter 3 Properties of a Random Sample 1

**Theorem 6.** Suppose  $X_n \stackrel{P}{\to} a$  and the real function g is continuous at a. Then  $g(X_n) \stackrel{P}{\to} g(a)$ .

**Theorem 7.** Suppose  $X_n \stackrel{P}{\to} X$  and the real function g is continuous at a. Then  $g(X_n) \stackrel{P}{\to} g(X)$ 

Chapter 3 Properties of a Random Sample

12

202301

Example 4.

Suppose  $X_n \xrightarrow{P} X$  and  $Y_n \xrightarrow{P} Y$ . Then  $X_n Y_n \xrightarrow{P} XY$ .

#### Example 5.

Consider a random sample from a Poisson distribution,  $X_i \sim POI(\mu)$ . Show that  $Y_n = e^{-\bar{X}_n}$  converges in probability to a constant, identify the constant.

**Definition 2.** (Consistency). Let X be a random variable with cdf  $F(x,\theta)$ ,  $\theta \in \Omega$ . Let  $X_1, \ldots, X_n$  be a sample from the distribution of X and let  $T_n$  denote a statistic. We say  $T_n$  is a consistent estimator of  $\theta$  if

$$T_n \stackrel{P}{\to} \theta$$
.

# Example 6.

Let  $X_1, \ldots, X_n$  denote a random sample from a distribution with mean  $\mu$  and variance  $\sigma^2$ . Assume that  $E[X_i^4] < \infty$ , so that  $V(S^2) < \infty$ . Show that  $S_n^2 = \frac{1}{n-1} \sum_{i=1}^n (X_i - \bar{X}_n)^2$  converges in probability to  $\sigma^2$ .

15

Chapter 3 Properties of a Random Sample

# 3.2 Convergence in Distribution

**Definition 3.** Let  $X_n$  be a sequence of random variables and let X be a random variable. Let  $F_{X_n}$  and  $F_X$  be, respectively, the cdfs of  $X_n$  and X. Let  $C(F_X)$  denote the set of all points where  $F_X$  is continuous. We say that  $X_n$  converges in distribution to X if

$$\lim_{n \to \infty} F_{X_n} = F_X, \forall x \in C(F_X).$$

We denote this convergence by

$$X_n \stackrel{D}{\to} X$$
.

Notes:

The material on convergence in probability and in distribution comes under what statisticians and probabilists refer to as asymptotic theory. Often, we say that the distribution of X is the asymptotic distribution or the limiting distribution of the sequence  $\{X_n\}$ .

Chapter 3 Properties of a Random Sample

16

**Definition 4.** The function  $F_X$  is the CDF of a **degenerate distribution** at value x = c if

$$F_X = \begin{cases} 0, & x < c \\ 1, & x \ge c \end{cases}$$

In other words,  $F_X$  is the CDF of a discrete distribution that assigns probability on at the value x = c and zero otherwise.

Notes: The following limits are useful in many problems:

$$1. \lim_{n \to \infty} \left( 1 + \frac{c}{n} \right)^{nb} = e^{cb}$$

2. 
$$\lim_{n\to\infty} \left(1 + \frac{c}{n} + \frac{d(n)}{n}\right)^{nb} = e^{cb} \text{ if } \lim_{n\to\infty} d(n) = 0$$

MEMEI5203 Statistical Inference 202301 MEMEI5203 Statistical Inference 202301

#### Example 7.

Let  $X_1, \ldots, X_n$ , be a random sample from a uniform distribution,  $X \sim U(0,1)$ , and let  $Y_n =$  $X_{n:n}$  the largest order statistic. Find the limiting distribution of  $Y_n$ .

Example 8.

Suppose that  $X_1, \ldots, X_n$ , is a random sample from a Pareto distribution,  $X \sim PAR(\alpha = 1, \theta =$ 24). Let  $Y_n = 1/nX_{n:n}$ , find the limiting distribution of  $Y_n$ , F(y), state the distribution and it's parameter, then find F(17.8).

MEME15203 STATISTICAL INFERENCE

20

# Theorem 8.

If  $X_n$  converges to X in probability, then  $X_n$ converges to X in distribution.

# Theorem 9. Slutky's Theorem

If  $X_n$  and  $Y_n$  are two sequences of random variables such that  $X_n \stackrel{P}{\to} c$  and  $Y_n \stackrel{D}{\to} Y$ , then:

$$1. X_n + Y_n \stackrel{D}{\to} c + Y$$

$$2. X_n Y_n \xrightarrow{D} cY$$

$$3. X_n/Y_n \stackrel{D}{\to} c/Y$$

Theorem 10. If  $X_n \stackrel{D}{\to} X$ , then for any continuous function  $g(x), g(X_n) \xrightarrow{D} g(X)$ . Note that g(x) is assumed not to depend on n.

### Example 9.

MEME15203 STATISTICAL INFERENCE

Consider a random sample of size n from a Bernoulli distribution,  $X_i \sim Bin(1, p)$ .

Chapter 3 Properties of a Random Sample

- (a) Show that  $\hat{p} = \frac{\sum_{i=1}^{n} X_i}{p} \stackrel{P}{\to} p$ .
- (b) Show that  $\hat{p}(1-\hat{p}) \stackrel{P}{\rightarrow} p(1-p)$ .
- (c) We know that  $\frac{\hat{p}-p}{\sqrt{p(1-p)/n}} \stackrel{D}{\to} Z \sim N(0,1)$ , find the limiting distribution of  $\frac{\hat{p}-p}{\sqrt{\hat{p}(1-\hat{p})/n}}$ .

# 3.3 Moment Generating Function Technique

To find the limiting distribution function of a random variable  $X_n$  by using the definition obviously requires that we know  $F_{X_n}(x)$  for each positive integer n. But it is often difficult to obtain  $F_{X_n}(x)$  in closed form. Fortunately, if it exists, the mgf that corresponds to the cdf  $F_{X_n}(x)$  often provides a convenient method of determining the limiting cdf.

**Theorem 11.** Let  $\{X_n\}$  be a sequence of random variables with mgf  $M_{X_n}(t)$  that exists for -h < t < h for all n. Let X be a random variable with mgf M(t), which exists for  $|t| < h_1 < h$ . If  $\lim_{n \to \infty} M_{X_n}(t) = M(t)$  for  $|t| < h_1$ , then  $X_n \stackrel{D}{\to} X$ .

Chapter 3 Properties of a Random Sample

## Example 11.

Let  $Y_n \sim GAM(\alpha = n, \theta = 2)$ . Find the limiting distribution of  $\frac{Y_n - n}{\sqrt{2n}}$  as  $n \to \infty$ , using moment generating function.

Example 10.

Let  $Y_n$  have a distribution that is Bin(n, p). Suppose that the mean  $\mu = np$  is the same for every n; that is,  $p = \mu/n$ , where  $\mu$  is a constant. Find the limiting distribution of  $Y_n$  using moment generating function technique.

Chapter 3 Properties of a Random Sample

24

#### Theorem 12.

Central Limit Theorem (CLT) If  $X_1, \ldots, X_n$ , is a random sample from a distribution with mean  $\mu$  and variance  $\sigma^2 < \infty$ , then the limiting distribution of

$$Z_n = \frac{\sum_{i=1}^n X_i - n\mu}{\sqrt{n}\sigma}$$

is the standard normal,  $Z_n, \to Z \sim N(0,1)$  as  $n \to \infty$ .

**Example 12.** Let  $X_1, X_2, ..., X_{100}$  be a random sample from an exponential distribution,  $X_i \sim EXP(1)$ , and let  $Y = X_1 + X_2 + \cdots + X_{100}$ .

- (a) Give an approximation for P[Y > 110]. 0.1587
- (b) If  $\bar{X}$  is the sample mean, then approximate  $P[1.1 < \bar{X} < 1.2]$ . 0.1359

Example 13.

Let  $X_i \sim U(22,60)$ , where  $X_1, X_2, \dots, X_{89}$  are independent. Find normal approximation for

$$P\left[\sum_{i=1}^{89} X_i \le 3659.0\right].$$

202301

Chapter 3 Properties of a Random Sample

Theorem 13.  $\Delta$ -Method

If  $\frac{\sqrt{n}(X_n-m)}{c} \xrightarrow{D} Z \sim N(0,1)$ , and if g(x) has a nonzero derivative at  $x=m, g'(m) \neq 0$ , then

$$\frac{\sqrt{n}[g(X_n) - g(m)]}{|cq'(m)|} \xrightarrow{D} Z \sim N(0, 1)$$

Chapter 3 Properties of a Random Sample

\_\_\_\_

In other words, for large n, if  $X_n \sim N(m, c^2/n)$ , then approximately

$$g(X_n) \sim N\left(g(m), \frac{c^2[g'(m)]^2}{n}\right)$$

Example 14.

Consider a random sample from a Poisson distribution,  $X_i \sim POI(\mu)$ . Find the asymtotic normal distribution of  $Y_n = e^{-\bar{X}_n}$ .

#### 3.4 Parameter and Statistic

Consider a set of observable random variables  $X_1, \ldots, X_n$ . For example, suppose the variables are a random sample of size n from a population.

**Definition 5.** A **parameter** is a numerical summary that would be calculated from all of the units in the population.

**Definition 6.** A function of observable random variables,  $T = t(X_1, \ldots, X_n)$ , which does not depend on any unknown parameters, is called a **statistic**.

In other words, a **statistic** is a numerical summary that is calculated from all of the units in a sample.

MEME15203 STATISTICAL INFERENCE

202301

31

3.5 Chi-Square Distribution

**Definition 7.** The variable Y is said to follow a chi-square distribution with v degrees of freedom if

$$Y \sim GAM(\alpha = \frac{v}{2}, \theta = 2).$$

A special notation for this is

$$Y \sim \chi^2(v)$$

**Theorem 14.** If  $Y \sim \chi^2(v)$ , then

• 
$$M_Y(t) = (1 - 2t)^{-v/2}$$

• 
$$E(Y^r) = 2^r \frac{\Gamma(v/2+r)}{\Gamma(v/2)}$$

MEME15203 STATISTICAL INFERENCE

202301

32

Chapter 3 Properties of a Random Sample

**Theorem 15.** If  $X \sim GAM(\alpha, \theta)$ , then

$$Y = \frac{2X}{\theta} \sim \chi^2(2\alpha).$$

Chapter 3 Properties of a Random Sample

**Example 15.** The time to failure (in years) of a certain type of component follows a gamma distribution with  $\alpha = 2$  and  $\theta = 3$  It is desired to determine a guarantee period for which 90% of the components will survive. Find the guarantee period.

3/

**Theorem 16.** If  $Y_i \sim \chi^2(v_i)$ ; i = 1, ..., n are independent chi-square variables, then

$$V = \sum_{i=1}^{n} Y_i \sim \chi^2 \left( \sum_{i=1}^{n} v_i \right)$$

**Theorem 17.** If  $Z \sim N(0, 1)$ , then  $Z^2 \sim \chi^2(1)$ .

MEME15203 STATISTICAL INFERENCE

202301

35

MEME15203 STATISTICAL INFERENCE

202301

Chapter 3 Properties of a Random Sample

**Theorem 18.** If  $X_1, \ldots, X_n$  denotes a random sample of size n from  $N(\mu, \sigma^2)$ , then

$$\frac{\sum_{i=1}^{n} (X_i - \mu)^2}{\sigma^2} \sim \chi^2(n)$$
$$\frac{n(\bar{X} - \mu)^2}{\sigma^2} \sim \chi^2(1)$$

Chapter 3 Properties of a Random Sample

30

**Theorem 19.** If  $X_1, \ldots, X_n$  denotes a random sample from  $N(\mu, \sigma^2)$ , then

- (i)  $\bar{X}$  and the terms  $X_i \bar{X}$ , i = 1, ..., n are independent.
- (ii)  $\bar{X}$  and  $S^2$  are independent.

(iii) 
$$\frac{(n-1)S^2}{\sigma^2} \sim \chi^2(n-1)$$
.

**Example 16.** Let X represent the lifetime in months of a battery, and assume that approximately  $X \sim N(60, 36)$ . Suppose that it was decided to sample 25 batteries, and to reject the claim that  $\sigma^2 = 36$  if  $S^2 \geq 54.63$ , and not reject the claim if  $S^2 < 54.63$ . Under this procedure, what would be the probability of rejecting the claim when in fact  $\sigma^2 = 36$ ?

3.6 Student's t Distributions

**Theorem 20.** If  $Z \sim N(0,1)$  and  $V \sim \chi^2(v)$ , and if Z and V are independent, then the distribution of

$$T = \frac{Z}{\sqrt{V/v}}$$

is referred to as **Student's** t **distribution** with v degrees of freedom, denoted by  $T \sim t(v)$ . The pdf is given by

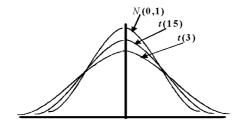

$$f(t) = \frac{\Gamma(\frac{v+1}{2})}{\Gamma(\frac{v}{2})} \frac{1}{\sqrt{v\pi}} \left(1 + \frac{t^2}{2}\right)^{-(v+1)/2}$$

MEMEI5203 STATISTICAL INFERENCE 202301 MEMEI5203 STATISTICAL INFERENCE 202301

#### Chapter 3 Properties of a Random Sample

The t distribution is symmetric about zero, and its general shape is similar to that of the standard normal distribution. Indeed, the t distribution approaches the standard normal distribution as  $v \to \infty$ . For smaller v the t distribution is flatter with thicker tails and, in fact,  $T \sim CAU(1,0)$  when v = 1.

Various T-distributions

Chapter 3 Properties of a Random Sample

40

**Theorem 21.** If  $X_1, \ldots, X_n$  denotes a random sample from  $N(\mu, \sigma^2)$  then

$$\frac{\bar{X} - \mu}{S/\sqrt{n}} \sim t(n-1)$$

# Example 17.

Assume that Z,  $V_1$ , and  $V_2$  are independent random variables with  $Z \sim N(0,1)$ ,  $V_1 \sim \chi^2(5)$ , and  $V_2 \sim \chi^2(9)$ . Find the following:

- (a)  $P[V_1 + V_2 < 8.6]$ .
- (b)  $P[Z/\sqrt{V_1/5} < 2.015]$ .
- (c)  $P[Z > 0.611\sqrt{V_2}]$ .

MEME15203 STATISTICAL INFERENCE

202301

43

# 3.7 Snedecor's F Distribution

**Theorem 22.** If  $V_1 \sim \chi^2(v_1)$  and  $V_2 \sim \chi^2(v_2)$  are independent, then the random variable

$$X = \frac{V_1/v_1}{V_2/v_2}$$

has the following pdf for x > 0:

$$f(x) = \frac{\Gamma(\frac{v_1 + v_2}{2}}{\Gamma(\frac{v_1}{2})\Gamma(\frac{v_2}{2})} \left(\frac{v_1}{v_2}\right)^{v_1/2} \left(1 + \frac{v_1}{v_2}x\right)^{-(v_1 + v_2)/2}$$

This is known as Snedecor's F distribution with  $v_1$  and  $v_2$  degrees of freedom, and is denoted by  $X \sim F(v_1, v_2)$ .

# Properties of the F-distribution

- The total area under the curve is one (as it is a density curve).
- The distribution is skewed to the right.
- The values are non-negative, start at zero, extend to the rightthe curve approaches, but never touches, the horizontal axis.

MEME15203 STATISTICAL INFERENCE
